

EVOGEN SEPTIC PLUS

a unique bacterial blend designed to accelerate degradation of organic wastes, reduce odors and keep the septic system operating efficiently.

overview

EVOGEN SEPTIC PLUS is a powdered product for use in septic tanks. The product contains a synergized blend of selectively chosen Bacillus organisms and free cellulase, all of which have been selected for accelerated degradation of organic wastes and toilet paper in a septic tank application. The bacteria have been selected for their ability to degrade organic compounds such as grease, fats, proteins, starch, sugars, and cellulose. The stabilized cellulase has been added specifically to breakdown toilet paper and other cellulosic material.

This degradation of organic waste results in effective waste and odor reduction. Reduction of organic waste improves the activity of the septic system, reduces the need for pump outs or costly repairs, and can vastly improve drainage.

applications

- septic tanks

advantages of EVOGEN SEPTIC PLUS

optimized, proprietary, application-specific bacterial consortium targets wastes found in septic tanks

dramatic reduction in volume of organic waste

effective odor reduction

improves drainage

enhances the natural biology of cesspools, septic tanks, and drainage areas.

stabilized cellulase for faster breakdown of toilet paper and cellulosic material

effervescent formulation for faster dissolution

safe for the user and the environment

increased system efficiency

ready to use
